5 Mission Critical IT MSP Services

You've worked hard to grow your company but with growth comes challenge, especially in the IT department. A managed service provider (MSP) can fill skill gaps, take on complex tasks, ensure support and provide system monitoring while allowing you to focus on your core competencies.

You may require some or all of these services. An initial assessment will put you on the right track.

What exactly does an MSP do?

MSPs manage IT responsibilities in five mission critical areas which are essential to business operations.

1. **Security:** Protects your network from cyber attacks and viruses.
2. **Recovery:** Recovers data from multiple devices: desktops, notebooks, servers, storage systems and networks
3. **System Alerts:** Monitors alerts and responds rapidly
4. **Patch Management:** Handles updates to improve functionality, usability, or performance
5. **Data Back Up:** Gets your business back up and running quickly.

Contact KTL Solutions for your free IT assessment and learn more about how using an MSP can help you reach your business goals.
